Name: Mahesh Kumar Udas

Roll No.: 21

Faculty: BSc.CSIT

Semester: Fourth

Subject: Theory of Computation

Year : Second

S.N.	Title	Date of Submission	Sign
1.	String Manipulation and Identifier Validation in C 1. WAP to find prefix, suffix and substring from given string. 2. WAP to validate C identifiers and keywords.	2082/05/	
2.	Design and Implementation of Deterministic Finite Automata (DFA) for Various Languages 1. Design and Implementation of a DFA to accept strings over $\{0, 1\}$ that ends with 11. 2. Design and Implementation of a DFA to accept strings over that start with 01. 3. Design and Implementation of a DFA to accept string over $\{a, b\}$ such that string does not end with ab. 4. Design and Implementation of a DFA to accept string over $\{a, b\}$ such that each string contain aba as substring.	2082/05/	
3.	Design and Implementation of Nondeterministic Finite Automata (NFA) for Various Languages. 1. Design and implementation of NFA to accept strings over $\{a, b\}$ that ends with ab. 2. Design and implementation of NFA to accept strings over $\{a, b\}$ that starts with ba. 3. Design and Implementation of NFA to accept string over $\{a, b\}$ such that each string contain bab as substring.	2082/05/	
4.	Design and implementation of Push down Automata 1. Design and implementation of PDA for Balanced Parentheses. 2. Design and implementation of PDA for even length strings over $\{a,b\}$.	2082/05/	
5.	Design and Implementation of Turing Machine 1. WAP to simulate a Turing Machine for $L=\{w \in \{a,b\}^* w \text{ has equal number of } a's \text{ and } b's\}$	2082/05/
